1. Consider a LAN network with ten computers. If two of them want to transfer a file between these two computers, the data will be transferred:
    A. Only via network
    B. Directly or via network
    C. Directly between them
2. The TCP/IP protocol suite contains:
    A. Five layers and 5 protocols
    B. Five layers and 2 protocols
    C. Five layers and many protocols
3. The following is a host-to-host protocol:
    A. TCP
    B. Ethernet
    C. Wi-Fi
4. _____transmission data flow is bi-directional and occurs at the same time.
    A. Simplex
    B. Half duplex
    C. Full duplex
5. To intercommunicate between two WANs, we need a:
    A. Switch
    B. Hub
    C. Router
6. The switch operates at the:
    A. Network layer
    B. Data Link layer
    C. Physical layer
7. The following is a one-way scheme:
    A. Communication
    B. Transmission
    C. Telecommunication
8. The following is a half-duplex device:
    A. Hub
    B. Switch
    C. Router
9. Jitter that happens between devices in full duplex is:
    A. Delay of arrived packets
    B. Difference in delay of arrived packets
    C. Interruption in packets
10. A transmission network example is:

    A. Broadcast network only
    B. Point-to-point
    C. Broadcast or point-to-point
