FACULTY OF ENGINEERING TECHNOLOGY

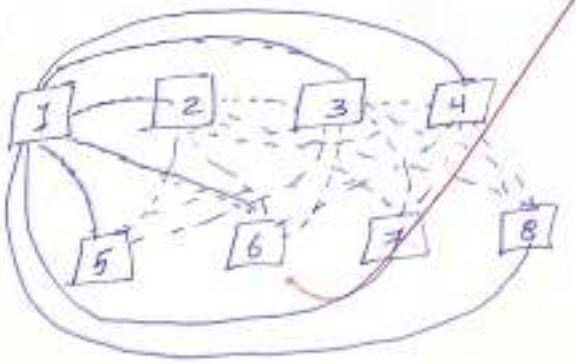
Subject: Comm.& Data Transmission Quiz 1

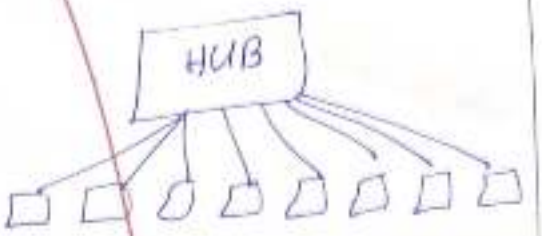
Name: ..... Duration: 5 minutes

Consider 8 devices connected as a network in mesh topology & then in star topology. Calculate how many links in each topology and calculate how many ports are needed for every device in each topology.

Mesh Topology :-

- number of station = 8
- Links = $\frac{8(7)}{2} = \frac{56}{2} = 28$
- 28 point-to-point Link to each device
- 7 Ports for each Device

STAR Topology :-




- number of station = 8
- Links = 8
- 8 point-to-point Link to HUB
- One Port for each Device
