radio waves range is:

- a. all frequencies below VHF
- b. UHF up to EHF
- c. VLF up to 1GHz
- d. VHF up to UHF

Radio waves, for the most part, are:

- a. multidirectional
- b. omnidirectional.
- c. unidirectional.
- d. bidirectional.

A light signal is travelling through a fiber. What is the delay in the signal if the length of fiber optic cable is 100m (assume a propagation speed is 2×10^8):

- a. 0.5 ms
- b. 0.05 ms
- c. 5 ms
- d. 0.5 μs

Refraction of light occurred when:

- a. angle of incidence equal to reflection angle
- b. angle of incidence greater than critical angle
- c. angle of incidence less than or equal to critical angle
- d. angle of incidence equal to critical angle

The satellite communication is:

- a. terrestrial line of sight communication
- b. microwave line of sight communication
- c. optical fiber communication
- d. sky wave communication

Data rate is maximum by :

- a. optical fibers.
- b. coaxial cable
- c. free space
- d. twisted-pair

The following portion of the electromagnetic spectrum is not used in telecommunication:

- a. infrared light
- b. Microwave
- c. cosmic rays
- d. ocean waves

The bandwidth of the light for the wavelength range (1000-1200) nm is ($c = 2 \times 10^8$):

- a. 33 THz
- b. 33 GHz
- c. 33 MHz
- d. 33 kHz
