نقدم لكم نحن أسرة فريق

(لجنة السنافر)

مجموعة أسئلة اختبارات إلكترونية تم تجميعها خلال الفصول الماضية
سائلين المولى أن يوفقنا وإياكم لكل خير

## تنويه

يوجد بعض الأسئلة عليها إجابات قد تحتمل الصواب وقد تحتمل الخطأ

فإن أصبنا فما هو إلا توفيق من الله

وإن أخطأنا فمن أنفسنا

An interest rate of 12% per semiannually compounded monthly is the same as

Select one:

- a. an effective 26.8% per year.
- b. an effective 1.5% per month.
- c. an effective 12.16% per year.

ة ضوئيا بـ CamScanner

A project has an extra cost of JD 10 000 at the end of 3rd year. If i=8% per year and n=13 years, then the Annual Worth (AW) is around:

Select one:

- a. -1265.2
- b. -1004.35
- c. -465.5

ة ضوئيا بـ CamScanner

An interest rate of 10% per year compounded semiannually is the same as

Select one:

- a. an effective 10% per month.
- b. an effective 5% per quarter compounded continuously.
- c. an effective 10.25% per year.

ة ضوئيا بـ CamScanner

The equivalent single value at the end of year 5 (X(5)), to an Annual Operating cost=JD 100, at an interest rate i=8% per year and n=5 years is around:

Select one:

- a. 100
- b. 586.66
- c. 399.27

ة ضوئيا بـ CamScanner

A machine with a Purchase (First) cost = 20 000 JD, a Salvage Value = 5000, n=5years. The Depreciation cost in the 1st year, (using the SL depreciation method) is:

Select one:

- a. 5000
- b. 20000
- c. 3000

ممسوحة ضوئيا بـ CamScanner

Given a Project with the following data: First (initial) cost = JD 7000; Annual Operating cost= JD 1200; Salvage Value = JD 1500; i=8% per year, and n= 12 years. To Calculate the Equivalent Single Value (Eq. X) at the end of year 8, we use:

Select one:

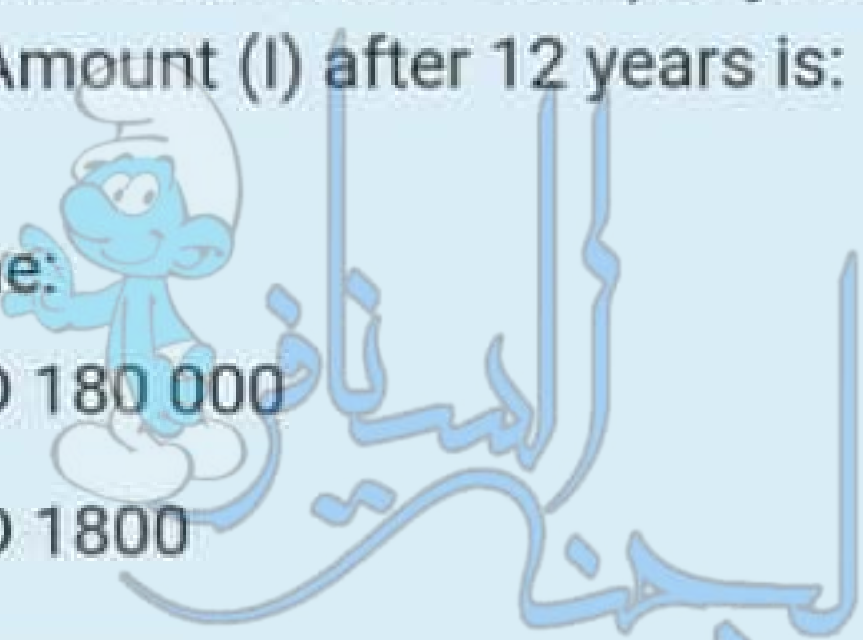

- a. 7000(F/P,8%,8) + 1200(P/A,8%,12) (F/P,8%,8) – 1500(P/F,8%,4)
- b. 7000(F/P,8%,7) + 1200(P/A,8%,12) (F/P,8%,7) – 1500(P/F,8%,4)
- c. 7000(F/P,8%,8) + 1200(P/A,8%,12) - 1500(P/F,8%,4)

ة ضوئيا بـ CamScanner

For an original (first) amount of JD 1500, at a Simple Interest Rate i=10% per year, the Interest Amount (I) after 12 years is:

Select one:

- a. JD 180 000
- b. JD 1800
- c. JD 3300

ة ضوئيا بـ CamScanner

Given a Project with the following data: First (initial) cost = JD 7000; Annual Operating cost= JD 1200; Salvage Value = JD 1500; i=8% per year, and n= 12 years. To Calculate the Equivalent Single Value (Eq. X) at the end of year 10, we use:

Select one:

- a. 7000(F/P,8%,10) + 1200(P/A,8%,12) - 1500(P/F,8%,2)
- b. 7000(F/P,8%,10) + 1200(P/A,8%,12) (F/P,8%,10) – 1500(P/F,8%,2)
- c. 7000(F/P,8%,9) + 1200(P/A,8%,12) (F/P,8%,9) – 1500(P/F,8%,2)

ة ضوئيا بـ CamScanner

Given a Salvage Value = JD 1000; i=8% per year and n=11 years. Then, the Eq. X(2) (equivalent single value at the end of year 2) is:

Select one:

- a. -428.88
- b. -500.25
- c. -1999

ممسوحة ضوئيا بـ CamScanner

The equivalent single value at the end of year 4 (X(4)), to an Annual Operating cost=JD 100, at an interest rate i=8% per year and n=4 years is around:

Select one:

- a. 331.21
- b. 100
- c. 450.61

ة ضوئيا بـ CamScanner

For a project with an Annual Operating Cost in the first 12 years = 1000 JD; i=8% per year; and n=infinity. The Capitalized Cost (CC) is:

Select one:

- a. -12500
- b. -80 JD
- c. -7536 JD

ممسوحة ضوئيا بـ CamScanner

A project with an annual operating cost = JD 1000, increased by 100 yearly over n=11 years. If i=8% per year, then the equivalent single payment at time zero (Eq. X(0)) is around:

Select one:

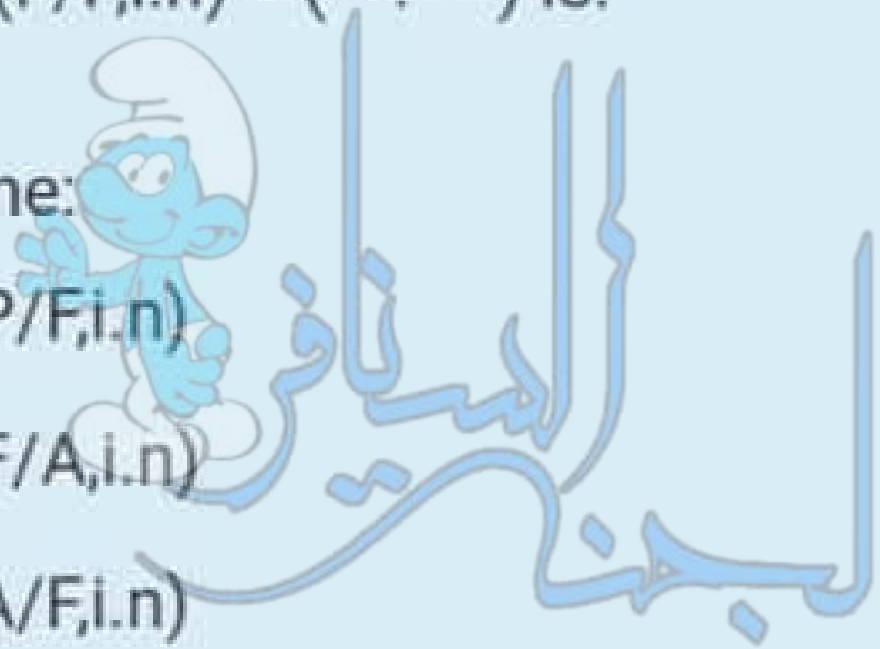

- a. 10165.4
- b. 9307.6
- c. 3026.5

ممسوحة ضوئيا بـ CamScanner

The missing Factor in the equation (P/A,i.n)(F/P,i.n) = (—?—) is:

Select one:

- a. (P/F,i.n)
- b. (F/A,i.n)
- c. (A/F,i.n)

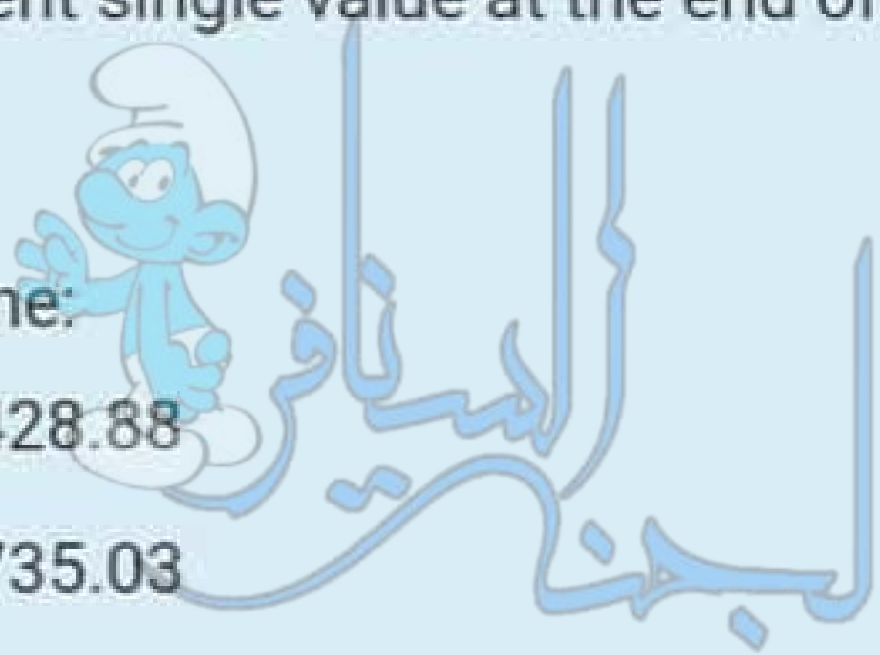

ة ضوئيا بـ CamScanner

Given a Salvage Value = JD 1000; i=8% per year and n=11 years. Then, the Eq. X(7) (equivalent single value at the end of year 7) is:

Select one:

- a. -428.88
- b. -735.03
- c. -1360.4

ة ضوئيا بـ CamScanner

For an original (first) amount of JD 1500, at a Simple Interest Rate i=10% per year, the Interest Amount (I) after 6 years is:

Select one:

- a. JD 2400
- b. JD 900
- c. JD 90 000

ممسوحة ضوئيا بـ CamScanner

Given a Salvage Value = JD 1000; i=8% per year and n=11 years. Then, the Eq. X(1) (equivalent single value at the end of year 1) is:

Select one:

- a. -1080
- b. -463.2
- c. -428.88

ة ضوئيا بـ CamScanner

A project with an annual operating cost = JD 1000, increased by 100 yearly over n=4 years. If i=8% per year, then the equivalent single payment at time zero (Eq. X(0)) is around:

Select one:

- a. 3777.1
- b. 2821.6
- c. 244.5

ة ضوئيا بـ CamScanner

Given 3 alternatives of projects: Alt. A with a PW (A) = -1200 JD and n=6 years, Alt. B with a PW (B) = -1500 JD and n=6 years, and Alt. C with PW(C) = -1000 and n=3 years. If i=8% per year, then which alternative should be selected?

Select one:

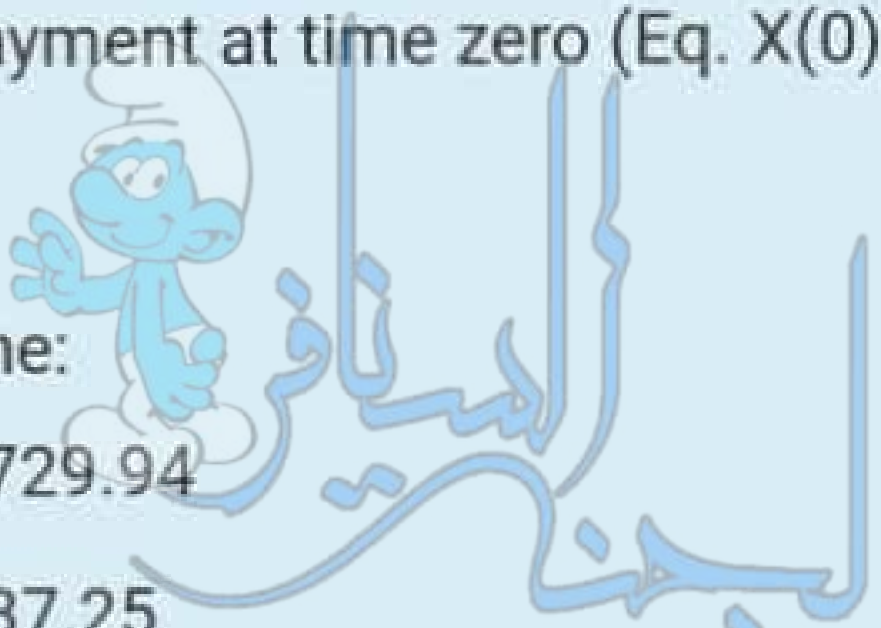

- a. Alt. C
- b. Alt. A
- c. Alt. B

ة ضوئيا بـ CamScanner

A project with an annual operating cost = JD 1000, increased by 100 yearly over n=5 years. If i=8% per year, then the equivalent single payment at time zero (Eq. X(0)) is around:

Select one:

- a. 4729.94
- b. 737.25
- c. 3777.1

ة ضوئيا بـ CamScanner

A machine with a Purchase (First) cost = 20 000 JD, a Salvage Value = 5000, n=5years. The Depreciation cost in the 2nd year, (using the SL depreciation method) is:

Select one:

- a. 17000
- b. 4000
- c. 3000

ة ضوئيا بـ CamScanner

A project has an extra cost of JD 10 000 at the end of 10th year. If i=8% per year and n=13 years, then the Annual Worth (AW) is around:

Select one:

- a. -465.5
- b. -1265.2
- c. -586.03

ة ضوئيا بـ CamScanner

Given 3 alternatives of projects: Alt. A with a PW (A) = -1500 JD and n=6 years, Alt. B with a PW (B) = -2000 and n=6 years, and Alt. C with PW(C) = -1000 JD and n=3 years. If i=8% per year, then which alternative should be selected?

Select one:

- a. Alt. A
- b. Alt. B
- c. Alt. C

ة ضوئيا بـ CamScanner

For a project with an Annual Operating Cost in the first 11 years = 1000 JD; i=8% per year; and n=infinity. The Capitalized Cost (CC) is:

Select one:

- a. -80 JD
- b. -7138.9
- c. -12500 JD

ممسوحة ضوئيا بـ CamScanner

A project with an annual operating cost = JD 1000, increased by 100 yearly over n=9 years. If i=6% per year, then the equivalent single payment at time zero (Eq. X(0)) is closest

Select one:

- a. 7627.2
- b. 8427.6
- c. 2100.8

Given 3 alternatives of projects: Alt. A with a PW (A) = -1000 JD and n=3 years, Alt. B with a PW (B) = -1700 JD and n=6 years, and Alt. C with PW(C) = -1500 and n=6 years. If i=8% per year, then which alternative should be selected?

Select one:

- a. Alt. C
- b. Alt. D
- c. Alt. A

For a project with an Annual Operating Cost in the first 6 years = 1000 JD, i=5% per year, and n=infinity. The Capitalized Cost (CC) is:

Select one:

a. -5746.8

b. -80 JD

c. -12500 JD

The equivalent single value at the end of year 9 (X([%]), to an Annual Operating cost=JD 100, at an interest rate i=8% per year and n=9 years is around:

Select one:

a. 1246.7

b. 624.68

c. 100

Given a Project with the following data: First (initial) cost = JD 7000; Annual Operating cost= JD 1200; Salvage Value = JD 1500; i=8% per year, and n= 12 years. To Calculate the Equivalent Single Value (Eq. X) at the end of year 6, we use:

Select one:

- a. 7000(F/P,8%,6) + 1200(P/A,8%,12)(F/P,8%,6) = 1500(P/F,8%,6)
- b. 7000(F/P,8%,6) + 1200(P/A,8%,12) = 1500(P/F,8%,6)
- c. 7000(F/P,8%,5) + 1200(P/A,8%,12)(F/P,8%,5) = 1500(P/F,8%,6)

The missing Factor in the equation (—?—) (F/P,i,n) = (F/A,i,n) is

Select one:

- a. (F/P,i,n)
- b. (F/A,i,n)
- c. (P/A,i,n)

A project with an annual operating cost = JD 1000, increased by 100 yearly over n=13 years. If i=8% per year, then the equivalent single payment at time zero (Eq. X(0)) is around:

Select one:

a. 10999.3

b. 11808.3

c. 3904.6

Given a Project with the following data: First (Initial) cost = JD 7000; Annual Operating cost= JD 1200; Salvage Value = JD 1500; i=8% per year, and n= 12 years. To Calculate the Equivalent Single Value (Eq. X) at the end of year 1, we use:

Select one:

- a. 7000 + 1200(P/A,8%,12)(F/P,8%,1) − 1500(P/F,8%,11)
- b. 7000(F/P,8%,1) + 1200(P/A,8%,12) − 1500(P/F,8%,11)
- c. 7000(F/P,8%,1) + 1200(P/A,8%,12)(F/P,8%,1) − 1500(P/F,8%,11)

For an original (first) amount of JD 1500, at a Simple Interest Rate i=10% per year, the Interest Amount (I) after 6 years is:

Select one:

- a. JD 900
- b. JD 90 000
- c. JD 2400

A project with an annual operating cost = JD 1000, increased by 100 yearly over n=4 years. If i=8% per year, then the equivalent single payment at time zero (Eq. X(0)) is around:

Select one:

a. 244.5

b. 2821.6

c. 3777.1

A project with an annual operating cost = JD 1000, increased by 100 yearly over n=4 years. If i=8% per year, then the equivalent single payment at time zero (Eq. X(0)) is around;

Select one:

- a. 244.5
- b. 2821.6
- c. 3777.1

Given a Project with the following data: First (initial) cost = JD 7000; Annual Operating cost= JD 1200; Salvage Value = JD 1500; i=8% per year, and n= 12 years. To Calculate the Equivalent Single Value (Eq. X) at the end of year 6, we use:

Select one:

- a. 7000(F/P,8%,5) + 1200(P/A,8%,12) (F/P,8%,5) – 1500(P/F,8%,6)
- b. 7000(F/P,8%,6) + 1200(P/A,8%,12) – 1500(P/F,8%,6)
- c. 7000(F/P,8%,6) + 1200(P/A,8%,12) (F/P,8%,6) – 1500(P/F,8%,6)

The missing factor in the equation (---?---)(P/A,i,n) = (P/G,i,n) is:

Select one:

- a. (A/G,i,n)
- b. (A/P,i,n)
- c. (G/P,i,n)

| | | | | | | | |

THE PRESENT WORTH VALUE FOR PROJECT A:

IIC

Select one:

- a. - 12125
- b. -2109.8
- c. 2109.8
- d. 12125

| Alt. | F.C. | Operating and maintenance | income at the end of 2nd year | Annual income | S.V. | Useful life | i |
|---|---|---|---|---|---|---|---|
| A | 20000 | 0 | 2800 | 2800 | 7000 | 8 | 8% |
| B | 32000 | 1600 | 4000 | 2800 | 0 | 4 | 8% |

THE PRESENT WORTH VALUE FOR PROJECT A is:

Select one:

- a. 12125
- b. 2109.8
- c. -2109.8
- d. - 12125

A project has an extra cost of JD 10 000 at the end of 8th year. If i=8% per year and n=13 years, then the Annual Worth (AW) is around:

Select one:

- a. -1265.2
- b. -465.5
- c. -683.55

For a project with an Annual Operating Cost in the first 5 years = 1000 JD; i=8% per year; and n=infinity. The Capitalized Cost (CC) is:

Select one:

- a. -3992.7 JD
- b. -12500
- c. -80 JD

An interest rate of 12% per semiannually compounded monthly is the same as

Select one:

- a. an effective 1.5% per month.
- b. an effective 12.16% per year.
- c. an effective 26.8% per year.

For an original (first) amount of JD 1500, at a Simple Interest Rate i=10% per year, the Interest Amount (I) after 11 years is:

Select one:

- a. JD 165 000
- b. JD 1650
- c. JD 3150

For a project with an Annual Operating Cost in the first 8 years = 1000 JD; i=8% per year; and n=infinity. The Capitalized Cost (CC) is:

Select one:

- a. -5746.6
- b. -12500 JD
- c. -80 JD

Given a Salvage Value = JD 1000; i=8% per year and n=11 years. Then, the Eq. X(10) (equivalent single value at the end of year 10) is:

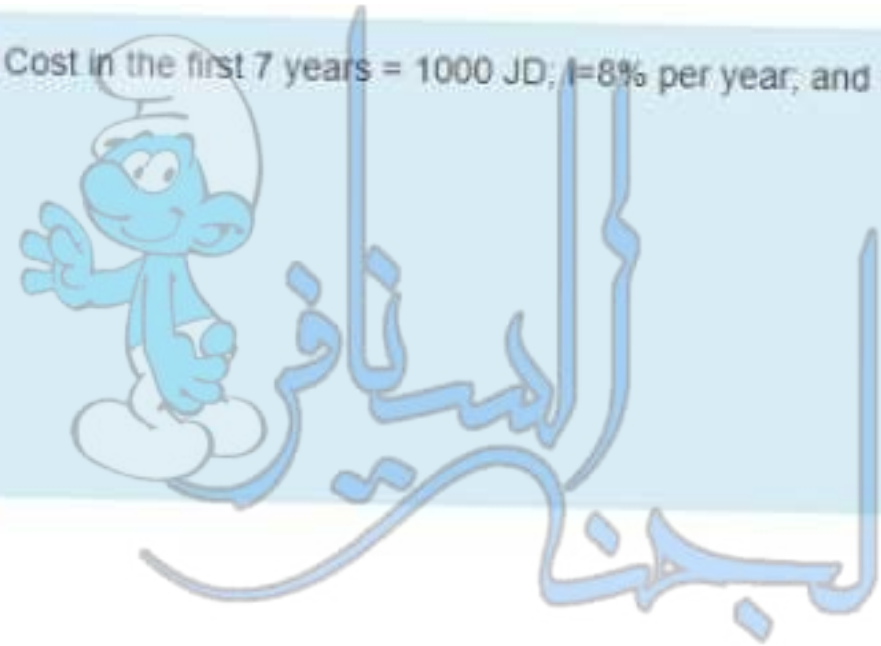

Select one:

- a. -428.88
- b. -1080
- c. -925.93

For a project with an Annual Operating Cost in the first 7 years = 1000 JD, i=8% per year, and n=infinity. The Capitalized Cost (CC) is:

Select one:

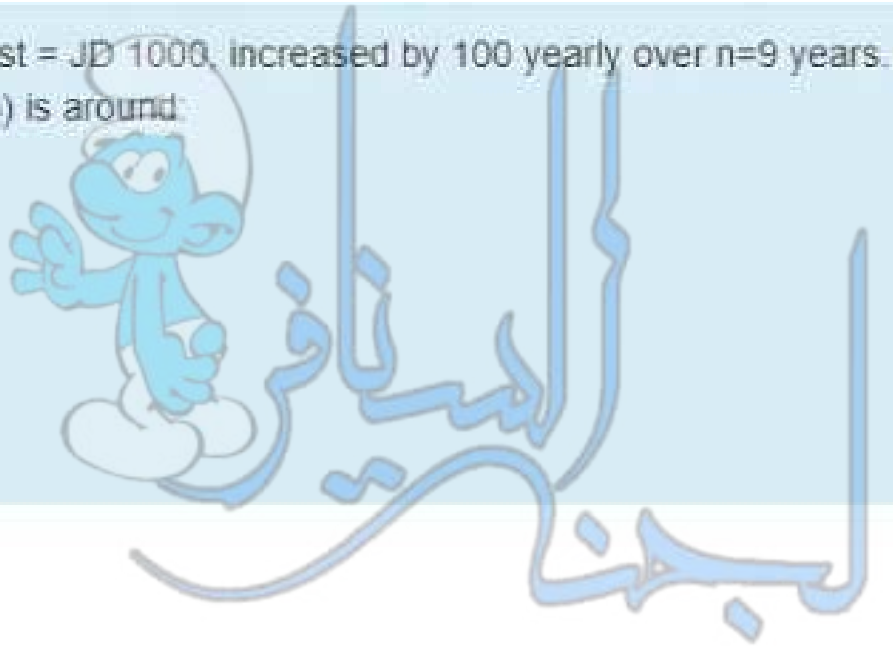

- a. -12500 JD
- b. -5206.3
- c. -80 JD

A project with an annual operating cost = JD 1000, increased by 100 yearly over n=9 years. If i=8% per year, then the equivalent single payment at time zero (Eq. X(0)) is around:

Select one:

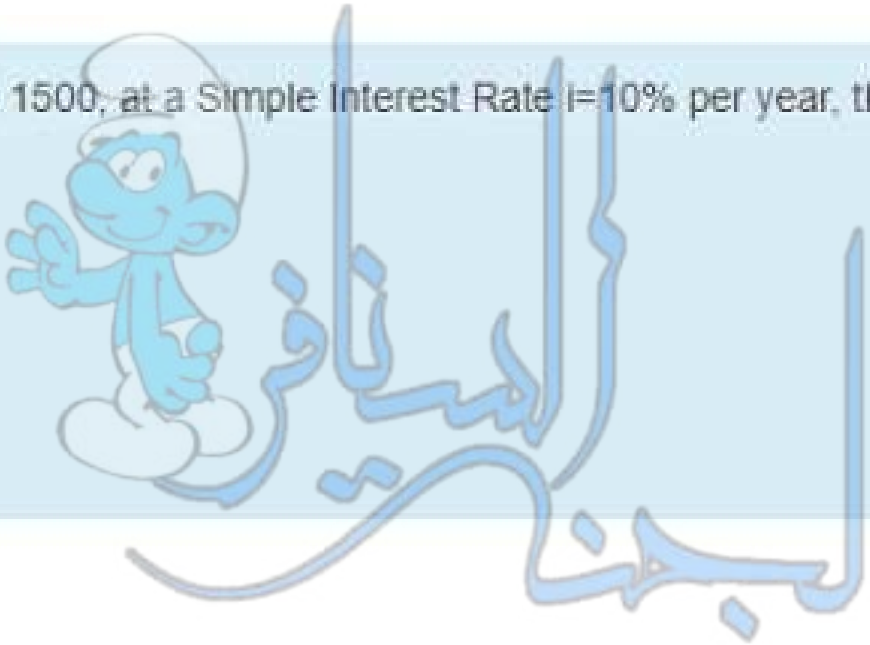

- a. 7527.2
- b. 2180.8
- c. 8427.6

For an original (first) amount of JD 1500, at a Simple Interest Rate i=10% per year, the Interest Amount (I) after 4 years is:

Select one:

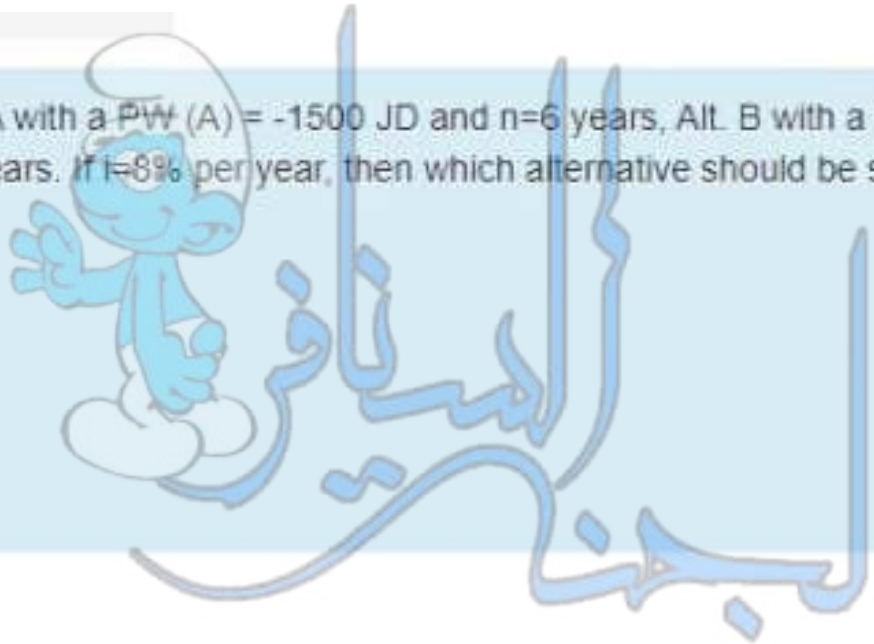

- a. JD 2100
- b. JD 60 000
- c. JD 600

Given 3 alternatives of projects: Alt. A with a PW (A) = -1500 JD and n=6 years, Alt. B with a PW (B) = -2000 and n=6 years, and Alt. C with PW(C) = -1000 JD and n=3 years. If i=8% per year, then which alternative should be selected?

Select one:

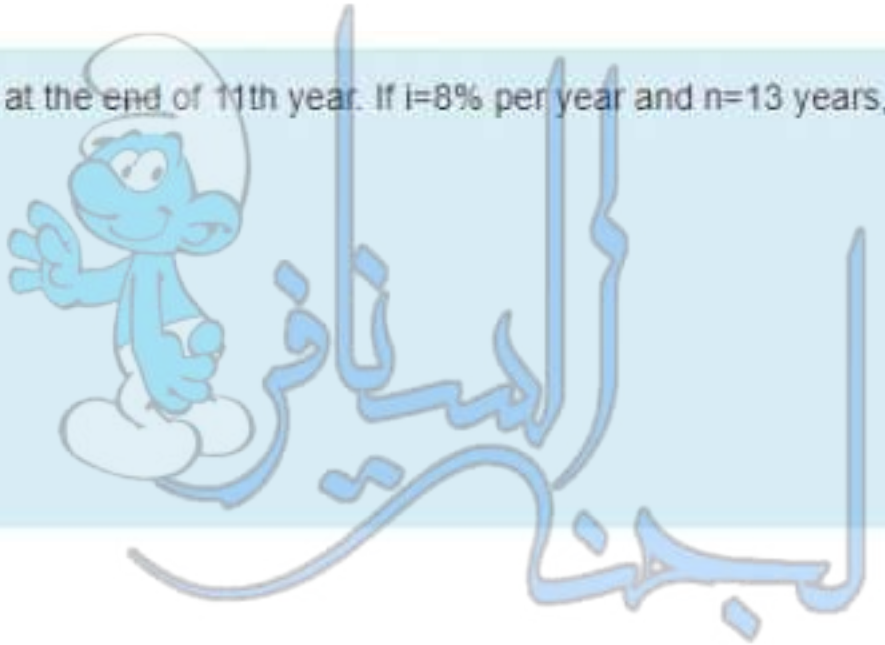

- a. Alt. B
- b. Alt. A
- c. Alt. C

A project has an extra cost of JD 10 000 at the end of 11th year. If i=8% per year and n=13 years, then the Annual Worth (AW) is around:

Select one:

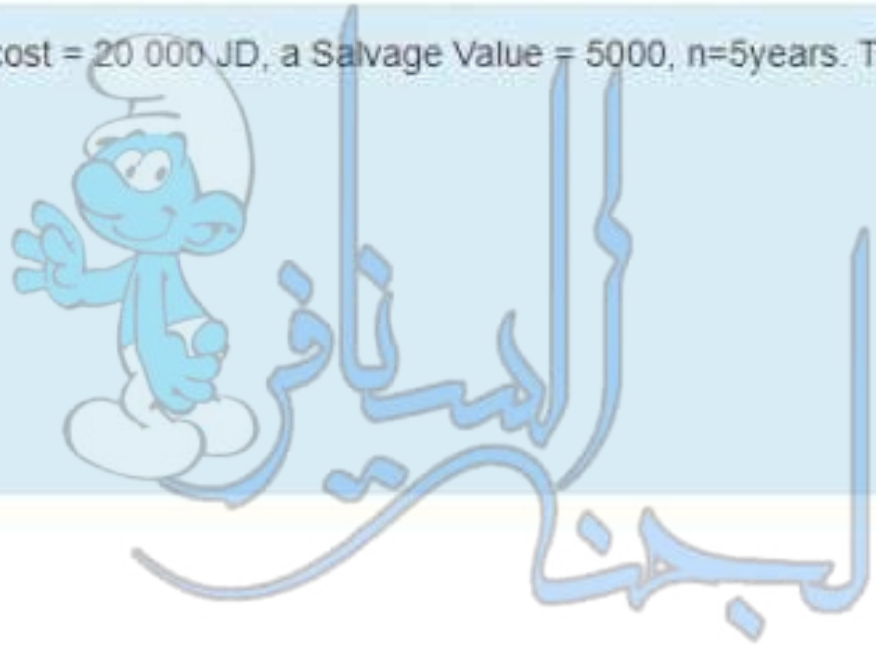

- a. -465.5
- b. -542.62
- c. -1265.2

A machine with a Purchase (First) cost = 20 000 JD, a Salvage Value = 5000, n=5years. The Book Value in the 1st year, (using the SL depreciation method) is:

Select one:

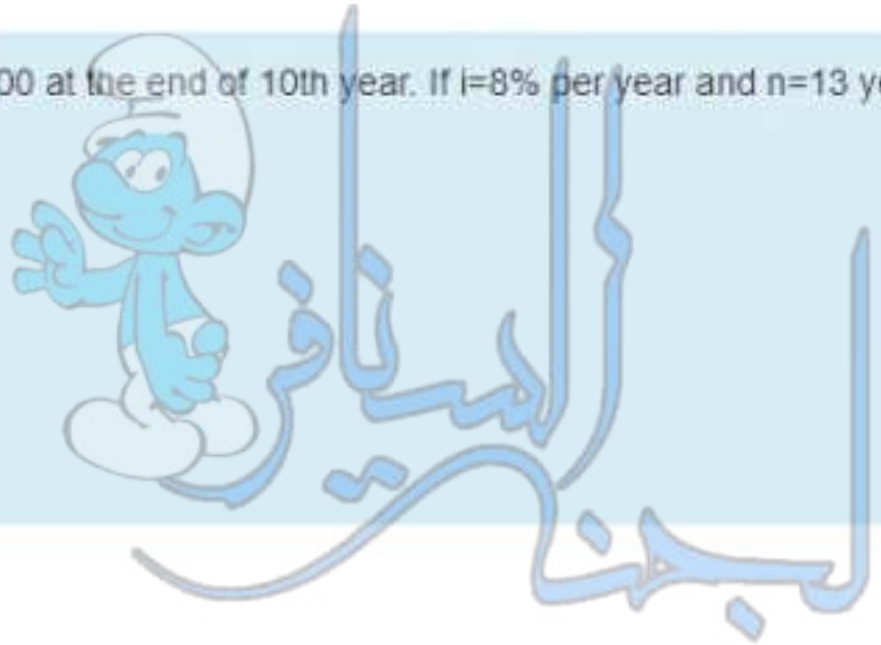

- a. 20000
- b. 5000
- c. 3000

A project has an extra cost of JD 10 000 at the end of 10th year. If i=8% per year and n=13 years, then the Annual Worth (AW) is around:

Select one:

- a. -1265.2
- b. -586.03
- c. -465.5

An interest rate of 8% per year compounded monthly is the same as

Select one:

- a. an effective 8.29% per year.
- b. an effective 8% per year.
- c. an effective 8.29% per month.

Given a Project with the following data: First (initial) cost = JD 7000; Annual Operating cost= JD 1200; Salvage Value = JD 1500; I=8% per year, and n= 12 years. To Calculate the Equivalent Single Value (Eq. X) at the end of year 9, we use:

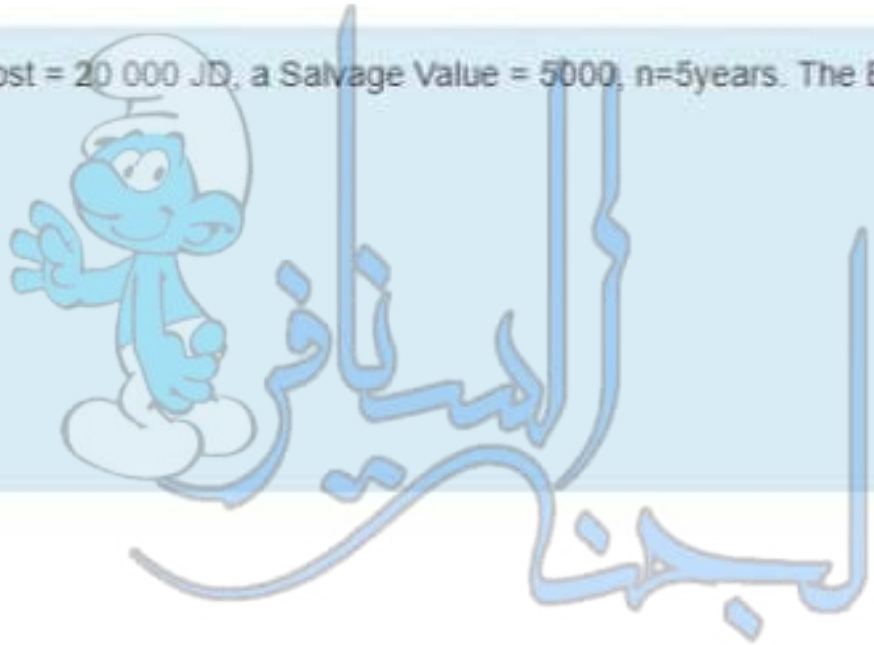

Select one:

- a. 7000(F/P,8%,9) + 1200(P/A,8%,12) – 1500(P/F,8%,3)
- b. 7000(F/P,8%,8) + 1200(P/A,8%,12)(F/P,8%,8) – 1500(P/F,8%,3)
- c. 7000(F/P,8%,9) + 1200(P/A,8%,12)(F/P,8%,9) – 1500(P/F,8%,3)

A machine with a Purchase (First) cost = 20 000 JD, a Salvage Value = 5000, n=5years. The Book Value in the 2nd year, (using the SL depreciation method) is:

Select one:

- a. 17000
- b. 15000
- c. 3000

Q1) Using AW method compare between the following alternatives: (2 marks)

| Alt. | F.C. | Operating and maintenance | Income at the end of 2nd year | Annual Income | S.V. | Useful life | i. |
|---|---|---|---|---|---|---|---|
| A | 35000 | 0 | 3500 | 2800 | 7000 | 8 | 8% |
| B | 32000 | 1500 | 4700 | 2500 | 0 | ∞ | 8% |

The AW for project (B) is: .....

Select one:

- a. 1237
- b. -1237
- c. -2109.8
- d. 2109.8

Given a Salvage Value = JD 1000; i=8% per year and n=11 years. Then, the Eq. X(8) (equivalent single value at the end of year 8) is:

Select one:

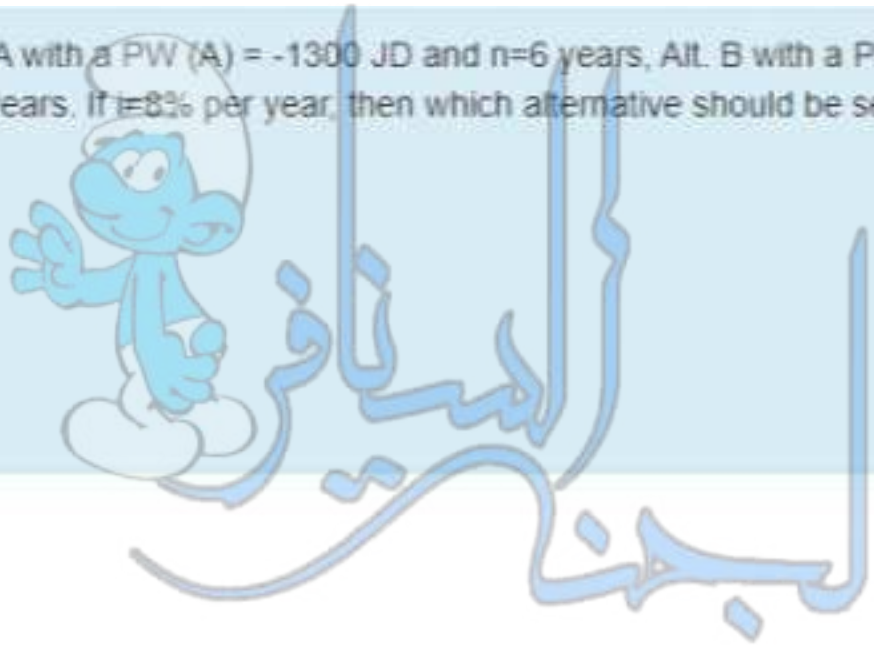

- a. -1259.7
- b. -793.83
- c. -428.88

Given 3 alternatives of projects: Alt. A with a PW (A) = -1300 JD and n=6 years, Alt. B with a PW (B) = -1600 JD and n=6 years, and Alt. C with PW(C) = -1000 and n=3 years. If i=8% per year, then which alternative should be selected?

Select one:

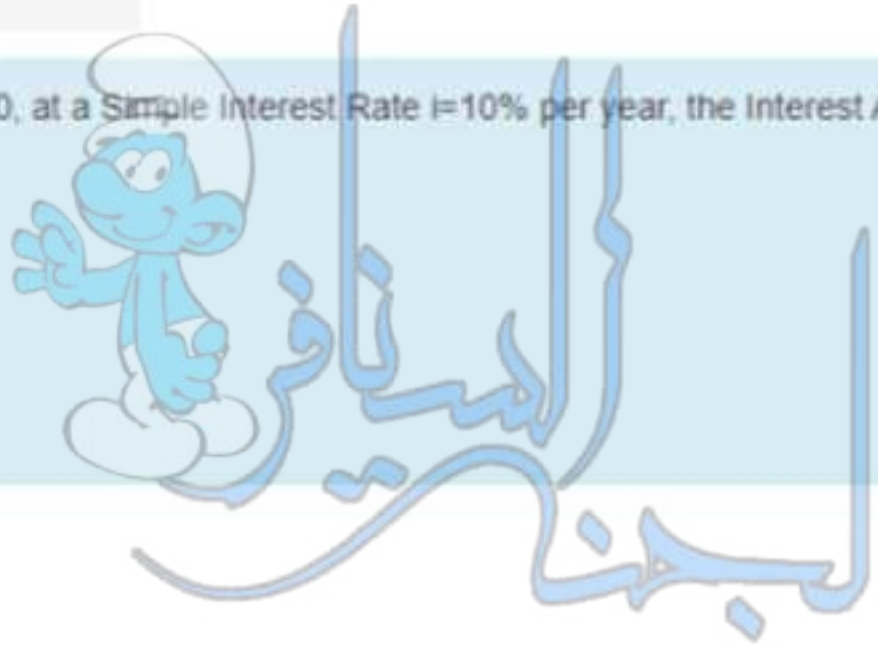

- a. Alt. A
- b. Alt. B
- c. Alt. C

For an original (first) amount of JD 1500, at a Simple Interest Rate i=10% per year, the Interest Amount (I) after 11 years is:

Select one:

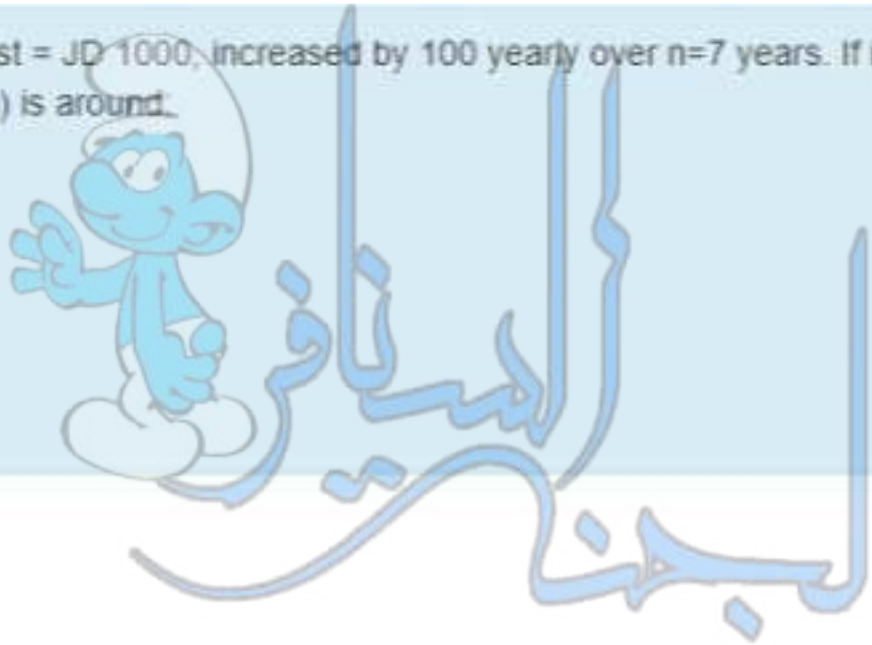

- a. JD 1650
- b. JD 165 000
- c. JD 3150

A project with an annual operating cost = JD 1000, increased by 100 yearly over n=7 years. If i=8% per year, then the equivalent single payment at time zero (Eq. X(0)) is around:

Select one:

- a. 1402.4
- b. 6608.7
- c. 5675.1

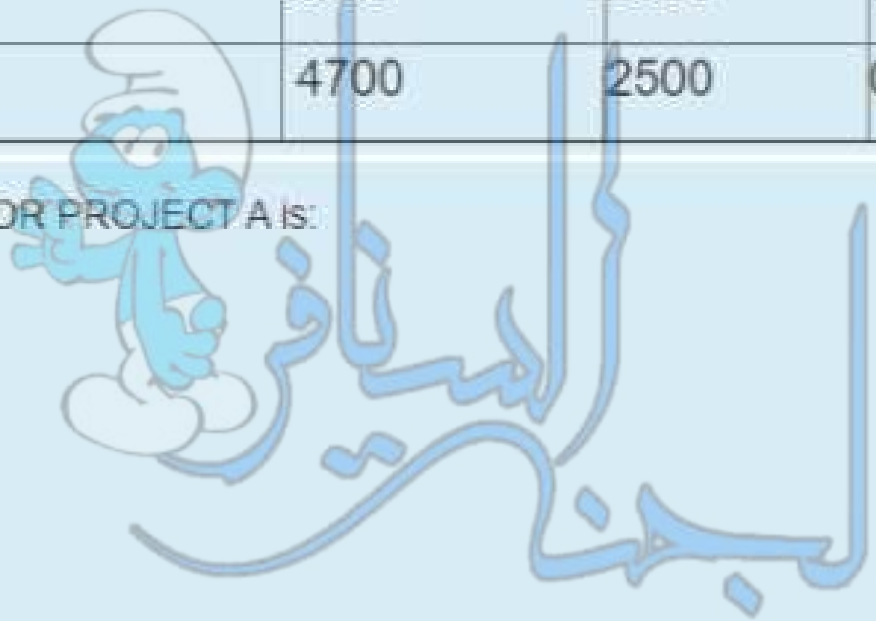

| Alt. | F.C. | Operating and maintenance | Income at the end of 2nd year | Annual Income | S.V. | Useful life | i. |
|---|---|---|---|---|---|---|---|
| A | 35000 | 0 | 3500 | 2800 | 7000 | 8 | 8% |
| B | 32000 | 1500 | 4700 | 2500 | 0 | ∞ | 8% |

THE PRESENT WORTH VALUE FOR PROJECT A is:

Select one:

- a. - 12125
- b. 2109.8
- c. 12125
- d. -2109.8

An interest rate of 5% per month compounded continuously is the same as

Select one:

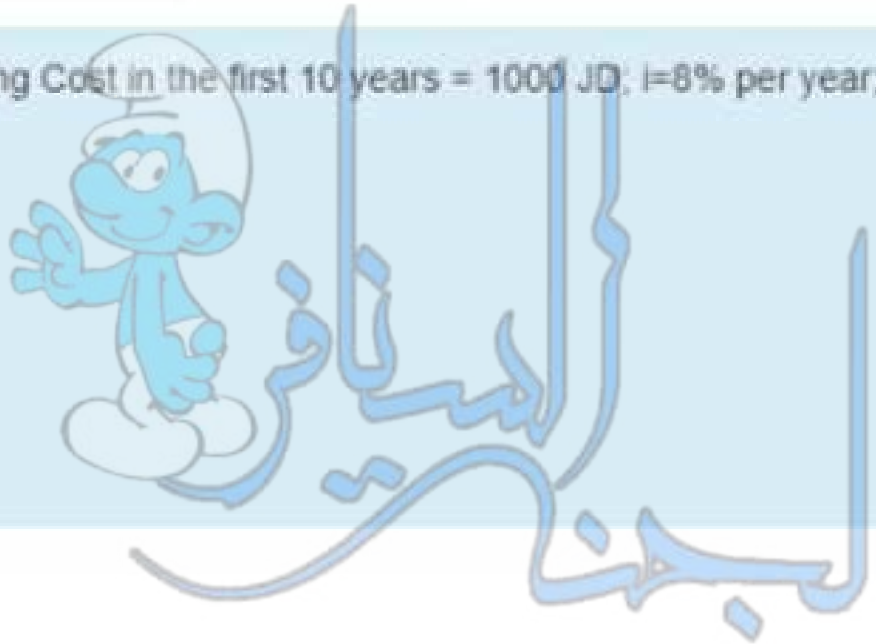

- a. an effective 2.5% per quarter.
- b. an effective 5% per month.
- c. an effective 5.12 % per month.

For a project with an Annual Operating Cost in the first 10 years = 1000 JD, i=8% per year, and n=infinity. The Capitalized Cost (CC) is:

Select one:

- a. -6710
- b. -12500 JD
- c. -80 JD

Q1) Using AW method compare between the following alternatives: (6 marks)

| Alt. | F.C. | Operating and maintenance | Income at the end of 2nd year | Annual Income | S.V. | Useful life | I. |
|---|---|---|---|---|---|---|---|
| A | 35000 | 0 | 3500 | 2800 | 7000 | 8 | 8% |
| B | 32000 | 1500 | 4700 | 2500 | 0 | ∞ | 8% |

a) The AW For project (A) is:

Select one:

- a. -2109.8
- b. -3542.8
- c. 1237
- d. -1237

A machine with a Purchase (First) cost = 20 000 JD, a Salvage Value = 5000, n=5years. The Book Value in the 5th year, (using the SL depreciation method) is:

Select one:

- a. 3000
- b. 20000
- c. 8000

For an original (first) amount of JD 1500, at a Simple Interest Rate is 10% per year, the Interest Amount (I) after 7 years is:

Select one:

a. JD 105000

b. JD 2550

c. JD 1050

For a project with an Annual Operating Cost in the first 5 years = 1000 JD, i=5% per year and n=infinity. The Capitalized Cost (CC) is:

Select one:

a. -3992.7 JD

b. -12500

c. -80 JD

Given a Project with the following data: First (initial) cost = JD 7000; Annual Operating cost= JD 1200; Salvage Value = JD 1500; I=8% per year, and n= 12 years. To Calculate the Equivalent Single Value (Eq. X) at the end of year 9, we use:

Select one:

- a. 7000(F/P,8%,9) + 1200(P/A,8%,12) – 1500(P/F,8%,3)
- b. 7000(F/P,8%,8) + 1200(P/A,8%,12)(F/P,8%,8) – 1500(P/F,8%,3)
- c. 7000(F/P,8%,9) + 1200(P/A,8%,12)(F/P,8%,9) – 1500(P/F,8%,3)

Given a Project with the following data: First (initial) cost = JD 7000; Annual Operating cost= JD 1200; Salvage Value = JD 1500; I=8% per year; and n= 12 years. To Calculate the Equivalent Single Value (Eq. X) at the end of year 4, we use:

Select one:

- a. 7000(F/P,8%,4) + 1200(P/A,8%,12)(F/P,8%,4) – 1500(P/F,8%,8)
- b. 7000(F/P,8%,3) + 1200(P/A,8%,12)(F/P,8%,3) – 1500(P/F,8%,8)
- c. 7000(F/P,8%,4) + 1200(P/A,8%,12) – 1500(P/F,8%,8)

For an original (first) amount of JD 1500, at a Simple Interest Rate of 10% per year, the Interest Amount (I) after 9 years is:

Select one:

a. JD 1350

b. JD 1350

c. JD 2850

A project has an extra cost of JD 10 000 at the end of 6th year. If i=8% per year and n=13 years, then the Annual Worth (AW) is around:

Select one:

- a. -465.5
- b. -797.63
- c. -1265.2

A machine with a Purchase (First) cost = 20 000 JD, a Salvage Value = 5000, n=5years. The Book Value in the 4th year, (using the SL depreciation method) is:

Select one:

- a. 2000
- b. 11000
- c. 3000

An interest rate of 12% per semiannually compounded monthly is the same as

Select one:

a. an effective 1.5% per month.

b. an effective 12.16% per year.

c. an effective 26.8% per year.

A machine with a Purchase (First) cost = 20 000 JD, a Salvage Value = 5000, n=5years. The Book Value in the 4th year, (using the SL depreciation method) is:

Select one:

- a. 2000
- b. 11000
- c. 3000

Given a Salvage Value = JD 1000; i=8% per year and n=11 years. Then, the Eq. X(5) (equivalent single value at the end of year 5) is:

Select one:

- a. -11586.8
- b. -630.17
- c. -428.88

The missing Factor in the equation (F/A,i,n)(—?—) = (P/A,i,n) is:

Select one:

- a. (F/A,i,n)
- b. (P/F,i,n)
- c. (A/F,i,n)

A project has an extra cost of JD 10 000 at the end of 5th year. If i=8% per year and n=13 years, then the Annual Worth (AW) is around:

Select one:

- a. -465.5
- b. -1265.2
- c. -861.07

Given a Project with the following data: First (initial) cost = JD 7000; Annual Operating cost= JD 1200; Salvage Value = JD 1500; i=8% per year, and n= 12 years. To Calculate the Equivalent Single Value (Eq. X) at the end of year 8, we use:

Select one:

a. 7000(F/P,8%,8) + 1200(P/A,8%,12) - 1500(P/F,8%,4)

b. 7000(F/P,8%,7) + 1200(P/A,8%,12)(F/P,8%,7) – 1500(P/F,8%,4)

c. 7000(F/P,8%,8) + 1200(P/A,8%,12)(F/P,8%,8) – 1500(P/F,8%,4)

A project has an extra cost of JD 10 000 at the end of 11th year. If i=8% per year and n=13 years, then the Annual Worth (AW) is around:

Select one:

- a. -465.5
- b. -1265.2
- c. -542.62

The equivalent single value at the end of year 4 (X(4)), to an Annual Operating cost=JD 100, at an interest rate i=8% per year and n=4 years is around:

Select one:

- a. 450.61
- b. 331.21
- c. 100

For a project with an Annual Operating Cost in the first 6 years = 1000 JD; i=8% per year, and n=infinity. The Capitalized Cost (CC) is:

Select one:

- a. -12500
- b. -4622.8 JD
- c. -80 JD

A project has an extra cost of JD 10 000 at the end of 4th year. If i=6% per year and n=13 years, then the Annual Worth (AW) is around:

Select one:

- a. -1265.2
- b. -930
- c. -465.5

A project has an extra cost of JD 10 000 at the end of 4th year. If i=6% per year and n=13 years, then the Annual Worth (AW) is around:

Select one:

a. -12652

b. -930

c. -4653

Given a Project with the following data: First (initial) cost = JD 7000; Annual Operating cost= JD 1200; Salvage Value = JD 1500; i=8% per year, and n= 12 years. To Calculate the Equivalent Single Value (Eq. X) at the end of year 4, we use:

Select one:

- a. 7000(F/P,8%,3) + 1200(P/A,8%,12) (F/P,8%,3) - 1500(P/F,8%,8)
- b. 7000(F/P,8%,4) + 1200(P/A,8%,12) - 1500(P/F,8%,8)
- c. 7000(F/P,8%,4) + 1200(P/A,8%,12) (F/P,8%,4) - 1500(P/F,8%,8)

Given 3 alternatives of projects: Alt. A with a PW (A) = -1000 JD and n=3 years, Alt. B with a PW (B) = -1300 JD and n=6 years, and Alt. C with PW(C) = -1600 and n=6 years. If i=8% per year, then which alternative should be selected?

Select one:

- a. Alt. A
- b. Alt. C
- c. Alt. B

A machine with a Purchase (First) cost = 20 000 JD, a Salvage Value = 5000, n=5years. The Depreciation cost in the 3rd year, (using the SL depreciation method) is:

Select one:

- a. 3000
- b. 11000
- c. 9000

Given a Project with the following data: First (initial) cost = JD 7000; Annual Operating cost= JD 1200; Salvage Value = JD 1500; i=8% per year, and n= 12 years. To Calculate the Equivalent Single Value (Eq. X) at the end of year 1, we use:

Select one:

- a. 7000(F/P,8%,1) + 1200(P/A,8%,12) – 1500(P/F,8%,11)
- b. 7000(F/P,8%,1) + 1200(P/A,8%,12)(F/P,8%,1) – 1500(P/F,8%,11)
- c. 7000 + 1200(P/A,8%,12)(F/P,8%,1) – 1500(P/F,8%,11)

The equivalent single value at the end of year 12 (X(12)), to an Annual Operating cost=JD 100, at an interest rate i=8% per year and n=12 years is around:

Select one:

- a. 1897.7
- b. 753.6
- c. 100

The missing factor in the equation (A/G,i,n)(—?—) = (P/G,i,n) is:

Select one:

- a. (P/A,i,n)
- b. (A/P,i,n)
- c. (G/P,i,n)

A project with an annual operating cost = JD 1000, increased by 100 yearly over n=13 years. If i=8% per year, then the equivalent single payment at time zero (Eq. X(0)) is [illegible]

Select one:

- a. 11808.3
- b. 10999.3
- c. 3904.6

An interest rate of 1.5% per month compounded continuously is the same as

Select one:

- a. an effective [illegible] per month.
- b. an effective 18% per year.
- c. an effective 1.511% per month.

For an original (first) amount of JD 1500, at a Simple Interest Rate i=10% per year, the Interest Amount (I) after 5 years is:

Select one:

- a. JD 2250
- b. JD 750
- c. JD 75 000

Given a Salvage Value = JD 1000, i=8% per year and n=11 years. Then, the Eq. X(7) (equivalent single value at the end of year 7) is:

Select one:

- a. -735.03
- b. -1360.4
- c. -428.88

Given a Salvage Value = JD 1000, i=8% per year and n=11 years. Then, the Eq. X(8) (equivalent single value at the end of year 8) is:

Select one:

- a. -428.88
- b. -1259.7
- c. -793.83

A project with an annual operating cost = JD 1000, increasing by 100 yearly over n=13 years, if i=8% per year, then the equivalent single payment at time zero (Eq. A/G) is closest

Select one:

- a. 11600.3
- b. 10999.3
- c. 3904.6

For an original (first) amount of JD 1500, at a Simple Interest Rate (r=10% per year, the Interest Amount (I) after 5 years is:

Select one:

a. JD 3150

b. JD 750

c. JD 75 000

An interest rate of 1.5% per month compounded continuously is the same as

Select one:

- a. an effective 18% per month
- b. an effective 18% per year
- c. an effective 1.511% per month

A machine with a Purchase (First) cost = 20 000 JD, a Salvage Value = 5000, n=5years. The Depreciation cost in the 3rd year (using the SL depreciation method) is:

Select one:

- a. 3000
- b. 11000
- c. 9000

Given a Salvage Value = JD 1000; i=8% per year and n=11 years. Then, the Eq. X(5) (equivalent single value at the end of year 5) is:

Select one:

- a. -11586.8
- b. -630.17
- c. -428.88

A project with an annual operating cost = JD 1000, increased by 100 yearly over 5 years. If i=8% per year, then the equivalent single payment at time zero (i.e. P(0)) is closest:

Select one:

- a. 7527.3
- b. 8437.5
- c. 3160.8

An interest rate of 1.5% per month compounded continuously is the same as

Select one:

- a. an effective [illegible] per month
- b. an effective 18% per year
- c. an effective 1.51% per month

Given a Project with the following data: First (initial) cost = JD 7000; Annual Operating cost= JD 1200; Salvage Value = JD 1500; i=8% per year, and n= 12 years. To Calculate the Equivalent Single Value (Eq. X) at the end of year 8, we use:

Select one:

a. 7000(F/P,8%,8) + 1200(P/A,8%,12) - 1500(P/F,8%,4)

b. 7000(F/P,8%,7) + 1200(P/A,8%,12)(F/P,8%,7) – 1500(P/F,8%,4)

c. 7000(F/P,8%,8) + 1200(P/A,8%,12)(F/P,8%,8) – 1500(P/F,8%,4)

For an original (first) amount of JD 1500, at a Simple Interest Rate of 12% per year, the Interest Amount (I) after 5 years is:

Select one:

a. JD 2250

b. JD 750

c. JD 75 000

An interest rate of 12% per semiannually compounded monthly is the same as

Select one:

a. an effective 1% per month.

b. an effective 12.16% per year.

c. an effective 26.8% per year.

A project with an annual operating cost = JD 1000, increased by 100 yearly over n=10 years. If i=8% per year, then the equivalent single payment at time zero (Eq. X(0)) is around:

Select one:

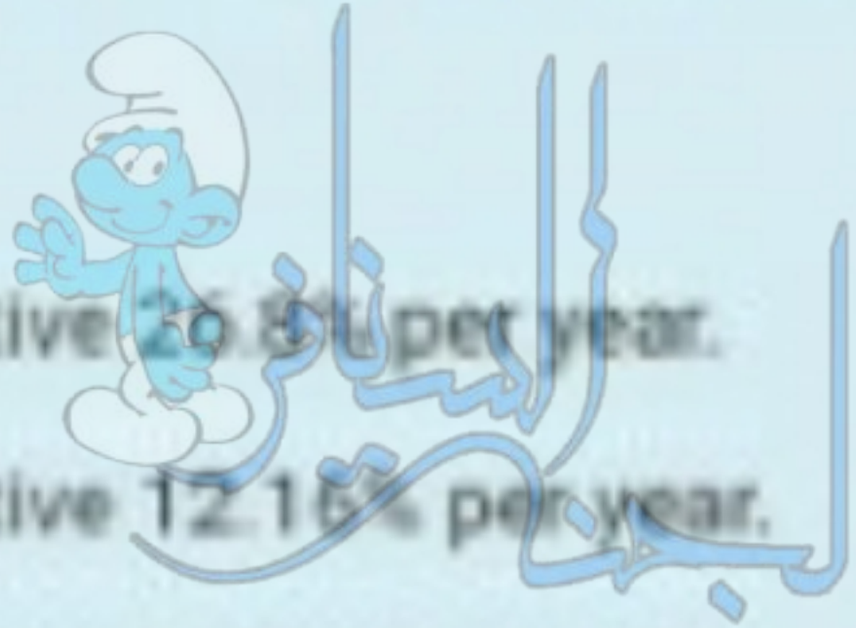

- a. 8427.6
- b. 9307.6
- c. 2597.6

An interest rate of 12% per semiannually compounded monthly is the same as

Select one:

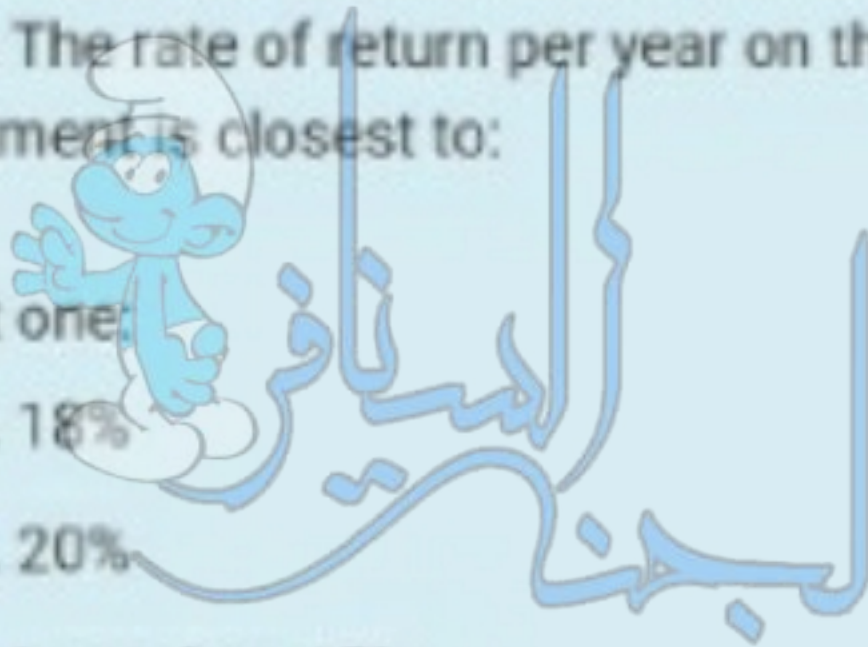

- a. an effective 26.8% per year.
- b. an effective 12.16% per year.
- c. an effective 1.5% per month.

The company spent $40,000 on a production control system that will increase profits by $13,400 per year for 5 years. The rate of return per year on the investment is closest to:

Select one:

- a. 18%
- b. 20%
- c. Less than 15%
- d. 16%

Given a Project with the following data: First (initial) cost = JD 7000; Annual Operating cost= JD 1200; Salvage Value = JD 1500; i=8% per year, and n= 12 years. To Calculate the Equivalent Single Value (Eq. X) at the end of year 8, we use:

Select one:

- a. 7000(F/P,8%,7) + 1200(P/A,8%,12)(F/P,8%,7) – 1500(P/F,8%,1)
- b. 7000(F/P,8%,8) + 1200(P/A,8%,12) + 1500(P/F,8%,4)
- c. 7000(F/P,8%,8) + 1200(P/A,8%,12)(F/P,8%,8) – 1500(P/F,8%,4)

An interest rate of 1.5% per month compounded continuously is the same as

اختر احد الخيارات

a. an effective 18% per year

b. an effective 1.5% per month

c. an effective 1.511% per month

For an original (first) amount of JD 1500, at a Simple Interest Rate (r=10% per year, the Interest Amount (I) after 6 years is:

Select one:

a. JD 2400

b. JD 900

c. JD 90 000

A project with an annual operating cost = JD 1000, increased by 100 yearly over n=13 years. If i=8% per year, then the equivalent single payment at time zero (Eq. P/G) is around:

Select one:

a. 11858.3

b. 10098.3

c. 9104.6

An interest rate of 10% per year compounded semiannually is the same as

Select one:

a. an effective [illegible] per month

b. an effective 10.25% per year

c. an effective 5% per quarter compounded continuously

A project with an annual operating cost = JD 1000, increased by 100 yearly over n=13 years. If i=8% per year, then the equivalent single payment at time zero (Eq. X(0)) is around:

Select one:

- a. 11808.3
- b. 3804.6
- c. 10909.3

THE PRESENT WORTH VALUE FOR PROJECT A

is:

Select one:

- a. - 12125
- b. -2100.8
- c. 2100.8
- d. 12125

A project with an annual operating cost = JD 1000, increased by 100 yearly over n=4 years. If i=8% per year, then the equivalent single payment at time zero (Eq. X(0)) is around:

Select one:

a. 244.5

b. 2621.6

c. 377.1

Given a Project with the following data: First (initial) cost = JD 7000; Annual Operating cost= JD 1200; Salvage Value = JD 1500; i=8% per year, and n= 12 years. To Calculate the Equivalent Single Value (Eq X) at the end of year 6, we use:

Select one:

a. 7000(F/P,8%,5) + 1200(P/A,8%,12) (F/P,8%,5) − 1500(P/F,8%,6)

b. 7000(F/P,8%,6) + 1200(P/A,8%,12) − 1500(P/F,8%,6)

c. 7000(F/P,8%,6) + 1200(P/A,8%,12) (F/P,8%,6) − 1500(P/F,8%,6)

The missing factor in the equation (---?---)(P/A,i,n) =(P/G,i,n) is:

Select one:

- a. (A/G,i,n)
- b. (A/P,i,n)
- c. (G/P,i,n)

A project with an annual operating cost = JD 1000, increased by 100 yearly over n=5 years. If i=8% per year, then the equivalent single payment at time zero (Eq. X(0)) is Select one:

- a. 4729.94
- b. 5675.1
- c. 1052.3

The missing Factor in the equation (P/F,i,n)(---?---) = (A/F,i,n) is:

Select one:

- a. (P/A,i,n)
- b. (A/P,i,n)
- c. (F/P,i,n)

For an original (first) amount of JD 1500, at a Simple Interest Rate i=10% per year, the Interest Amount (I) after 9 years is:

Select one:

a. JD 2850

b. JD 1350

c. JD 135,000

For an original (first) amount of JD 1500, at a Simple Interest Rate (r=10% per year, the Interest Amount (I) after 12 years is:

Select one:

a. JD 180,000

b. JD 3300

c. JD 1800

A project with an annual operating cost = JD 1000, increased by 100 yearly over n=6 years. If i=6% per year, then the equivalent single payment at time zero (Eq. X(0)) is around

Select one:

- a. 1052.3
- b. 4728.94
- c. 5675.1

A project with an annual operating cost = JD 1000, increased by 100 yearly over n=4 years. If i=8% per year, then the equivalent single payment at time zero (Eq. X(0)) is around:

Select one:

- a. 3777.1
- b. 2821.6
- c. 244.5

Given a Project with the following data: First (initial) cost = JD 7000; Annual Operating cost= JD 1200; Salvage Value = JD 1500; i=8% per year, and n= 12 years. To Calculate the Equivalent Single Value (Eq. X) at the end of year 5, we use:

Select one:

a. 7000(F/P,8%,5) + 1200(P/A,8%,12) - 1500(P/F,8%,7)

b. 7000(F/P,8%,4) + 1200(P/A,8%,12)(F/P,8%,4) - 1500(P/F,8%,7)

c. 7000(F/P,8%,5) + 1200(P/A,8%,12)(F/P,8%,5) - 1500(P/F,8%,7)

Given a Salvage Value = JD 1000; i=8% per year and n=11 years. Then, the Eq. x(1.0) (equivalent single value at the end of year 10) is

اختر احد الخيارات

a. 926.93

b. 1080

c. 428.80

The missing Factor in the equation (P/F,i,n)(---?---) = (A/F,i,n) is:

Select one:

a. (F/P,i,n)

b. (P/A,i,n)

c. (A/P,i,n)

The missing factor in the equation [—?—](P/A,i,n) =

(P/G,i,n) is:

اختر احد الخيارات

a. (A/G,i,n)

b. (G/P,i,n)

c. (A/P,i,n)

Given a Salvage Value = JD 1000, i=5% per year and n=11 years. Then, the Eq. for equivalent single value at the end of year 9 is:

Select one:

a. -428.88

b. -857.34

c. -1166.4

The missing Factor in the equation (P/F,i,n)(---?---) = (A/F,i,n) is:

Select one:

a. (F/P,i,n)

b. (P/A,i,n)

c. (A/P,i,n)

For an original (first) amount of JD 1500, at a Simple Interest Rate i=10% per year, the Interest Amount (I) after 8 years is:

Select one:

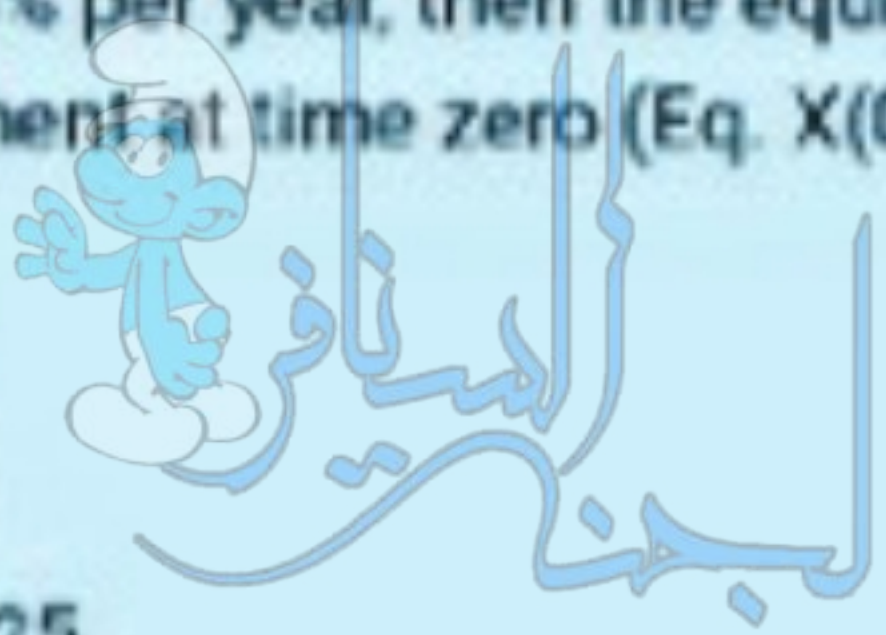

- a. JD 2700
- b. JD 1200
- c. JD 120 000

A project with an annual operating cost = JD 1000, increased by 100 yearly over n=5 years. If i=8% per year, then the equivalent single payment at time zero (Eq. X(0)) is around:

Select one:

- a. 737.25
- b. 4729.94

The missing factor in the equation (—?—) (P/A,i,n) = (P/G,i,n) is:

Select one:

a. (A/G,i,n)

b. (G/P,i,n)

c. (A/P,i,n)

Given a Salvage Value = JD 1000, i=8% per year and n=11 years. Then, the Eq. II(6) (equivalent single value at the end of year 6) is:

Select one:

- a. -428.88
- b. -690.58
- c. -1460.3

Given 3 alternatives of projects: Alt. A with a PW (A) = 1000 JD and n=3 years, Alt. B with a PW (B) = 1700 JD and n=6 years, and Alt. C with PW(C) = 1500 and n=6 years. If i=8% per year, then which alternative should be selected?

Select one:

- a. Alt. C
- b. Alt. B
- c. Alt. A

Given 3 alternatives of projects: Alt. A with a PW (A) = -1000 JD and n=3 years, Alt. B with a PW (B) = -1700 JD and n=6 years, and Alt. C with PW(C) = -1500 and n=6 years. If i=8% per year, then which alternative should be selected?

Select one:

- a. Alt. C
- b. Alt. B
- c. Alt. A

The equivalent single value at the end of year 9 (x(9)), to an Annual Operating cost =JD 100, at an interest rate i=8% per year and n=9 years is around:

Select one:

- a. 1248.7
- b. 624.68
- c. 100

For a project with an Annual Operating Cost in the first 6 years = 1000 JD, i=5% per year, and n=infinity. The Capitalized Cost (CC) is:

Select one:

a. -5746.8

b. -80 JD

c. -12500 JD

A machine with a Purchase (First) cost = 20 000 JD, a Salvage Value = 5000, n=5years. The Book Value in the 4th year, (using the SL depreciation method) is:

Select one:

- a. 2000
- b. 11000
- c. 3000

For a project with an Annual Operating Cost in the first 8 years = 1000 JD; i=8% per year; and n=infinity. The Capitalized Cost (CC) is:

Select one:

- a. -5746.6
- b. -80 JD
- c. -12500 JD

A machine with a Purchase (First) cost = 20 000 JD, a Salvage Value = 5000, n=5years. The Book Value in the 4th year, (using the SL depreciation method) is:

Select one:

- a. 2000
- b. 11000
- c. 3000

A machine with a Purchase (First) cost = 20 000 JD, a Salvage Value = 5000, n=5years. The Book Value in the 4th year, (using the SL depreciation method) is:

Select one:

- a. 2000
- b. 11000
- c. 3000

A project has an extra cost of JD 10 000 at the end of 5th year. If i=8% per year and n=13 years, then the Annual Worth (AW) is around:

Select one:

- a. -465.5
- b. -1265.2
- c. -861.07

A project has an extra cost of JD 10 000 at the end of 5th year. If i=8% per year and n=13 years, then the Annual Worth (AW) is around:

Select one:

a. -465.5

b. -1265.2

c. -861.07
