Part 1

Question	1	2	3	4	5	6	7	8
Answer	D	A	D	D	A	B	C	B

Part 2

Q	Answer	Q	Answer	Q	Answer
1	Oxidizing	2	3.44 g/cm³	3	it wont dissolve
4	Bath water	5	crucible	6	decrease
7	not affected				Not Affected

PART1

Choose the answer of the following question's and transfer it in CAPITAL letters to table

Q1: If You have left over some unused chemicals after you have completed the lab, you should:

A- Place liquids and solids in the trash always.
B- Put left over chemicals back into their original containers.
C- Pour all the chemicals in the sink
D- Follow all instructions given for disposal of chemicals.

Q2: According to solubility rules, which of the following statements is correct:

A- Adding large amount of solute will show a precipitate because the solution reaches saturation.
B- All group 1 salts are water insoluble. (soluble)
C- Not all Nitrate (NO_3^-) salts are water soluble.
D- Increasing temperature of solvent will decrease (increase) the solubility of solid solute.

Q3: A suitable equipment for measuring volume of solid in density experiment is:

A- Volumetric flask B- Pycnometer C- Balance D- Graduated cylinder

Q4: Measuring the boiling point of a compound can be used to _____

A- Confirm the compound's formula
B- Check the compound's purity
C- Determine the compound's structure
D- Calculate the compound's density

Q5: Suppose a boiling point experiment for a liquid is performed at the Dead sea, and on the top of Rum mountains. which of the following statements is incorrect regarding the measured boiling point of this liquid?

↑ P_{ext} ↑ B_P ↓ Height

A- The measuring boiling point will stay the same because it's the same compound.
B- The boiling point will be lower at higher altitude due to the decreased atmospheric pressure.
C- The boiling point will be higher at lower altitude due to the increased atmospheric pressure.
D- The boiling point will be higher at dead sea than Rum mountain.

Q6: A sample of hydrate $CoCl_2 \cdot XH_2O$ is heated in a crucible. After heating, a blue powder of $CoCl_2$ is produced. If the mass percent of $CoCl_2$ in hydrate =60%. Calculate the water of crystallization(X) of this salt? (Atomic weights: H=1 , O=16 , Cl=35.5 , Co=59 g/mol)

A- 6 B- 4 C- 5 D- 3

Q7: Calculate the mass of water in $CaSO_4.2H_2O$, if mass of anhydrous salt = 7.5g.
(Molar mass of H_2O= 18 , $CaSO_4$ = 136 g/mol).

A- 2.26g B- 1.51g C- 1.99g D- 2.98g

Q8: Which one of these equipment used to extinguish or control small fire accident in lab?

A- 

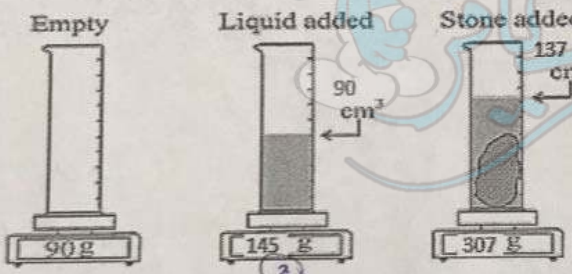

B- 

C- 

D- 

PART2:

Answer the following question's and *transfer your answer to the table in the cover page*

Q		Answer
1	This Pictogram stands for 	oxidizing
2	According to the following picture, the density of stone equals:  $d_{stone} = \frac{m_{stone}}{V_{stone}} = \frac{162\,g}{47\,cm^3} = 3.44\,g/cm^3$	$3.44\,g/cm^3$
3	What physical observation do you see when I_2 is mixed with water ?	it won't dissolve
4	What is the way you use in your lab to heat flammable liquids ?	Bath water
5	The name of this equipment, is 	cruicble
6	How is the value of X (moles of water) of a hydrated salt affected if water is completely driven off during heating? $X = \frac{n_{H_2O}}{n_{anh}}$	decrease
7	If a liquid sample contains some glass impurities, this cause the boiling point of liquid to: (increase, decrease, not affected)	not affected

Good LUCK
