PART1 Answer the following question's and ***transfer your answer to the table in the***

Q		Answer
1	This glassware is called 	round bottom flask
2	Calculate the mass of a liquid filling a 300 cm^3 conical flask, if the density of the liquid is 8.0g/cm^3	2400 g
3	When two liquids are mix together, and form one homogenous layer, these two liquids are known to be	soluble
4	When Heating flammable chemicals, this should be carried out using	~~Hood~~
5	This figure shows an equipment that used for ? 	
6	"Always add acid to water and never the reverse" Is this statement true or false??	true
7	The percent of water in a hydrated salt ($MSO_4.9H_2O$) is 45%. The atomic weight of element "M" is ..... g/mol At.wts (S=32, O =16, H=1.0 g/mol)	88 g/mol

cover

PART2

Choose the correct answer of the following questions and transfer it in CAPITAL letters to table

Which of the following safety rules is correct :

A. Every chemical should be treated as though it were dangerous.
B. When handling any toxic or hazardous agent, no need to wear the appropriate gloves.
C. You can carry original containers of chemicals (stock bottles) to your benchtop.
D. Before using any chemical, no need to read the label on the reagent bottles.

Q2: One of the following is soluble in water:

A. Aluminum hydroxide $Al(OH)_3$
B. Potassium hydroxide KOH
C. Mercury sulfate $HgSO_4$
D. lead(II) chloride $PbCl_2$

Q3: The method used to find the volume of an irregular solid object:

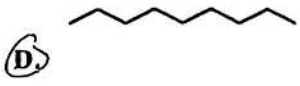

A- Pycnometer B- Dehydration C- Dumas method D- Water displ

Q4: Which of the following compounds has the Lowest boiling point?

A. 

B. 

C. 

D. 

Q5: A sample weighing 12.25 g of a hydrated copper sulfate, $CuSO_4.XH_2O$, is heated until it loses all of its water. Its new mass after complete dehydration is 7.19 g. What is the value of X? [M.m (g/mol) $CuSO_4$=159.5, H_2O =18]

A. 5
B. 3
C. 7
D. 6

Q6: Which of the following statements about hydrated salts is correct?

A. The degree of hydration can be determined by heating it to a constant mass and taking measurements before and after heating.
B. When heated, water of crystallization evaporates to leaving behind the hydrated salt.
C. The mass of the anhydrous salt will be greater than the mass of the hydrated salt.
D. Incomplete dehydration of hydrated salts causes the value of "X to be greater than the actual value.

Q7: A student wants to determine the molar mass of a volatile liquid by Dumas method, after performing the experiment, the following data were collected:
V= 138.2 mL, P = 754 torr, T = 371 K, m = 0.261 g.
Use these data to calculate the molar mass of this liquid and identify the gas using the table beside.
(Atomic masses (g/mol):C=12.00, O=16.00 H=1.00, R=0.08206 L.atm/K.mol,1atm=760 torr) (Use the ideal gas law)

Pentane	C_5H_{12}
Acetone	C_3H_6O
Cyclohexane	C_6H_{12}

A. Pentane
B. Acetone
C. Cyclohexane
D. None of the above

Q8: During the experiment of determination of the molar mass of a volatile liquid. If a student by mistake tore(مزق) part of the foil cap while heating the liquid, which caused all the vapor to escape out of the flask. Describe how would this mistake affect the calculated molar mass.

A. The molar mass of liquid will be less than the actual value
B. The molar mass of liquid will be greater than the actual value
C. The molar mass of liquid will not be affected.

Good LUCK
